

Repairing Your Outlook Express E-Mail Account

NOTICE

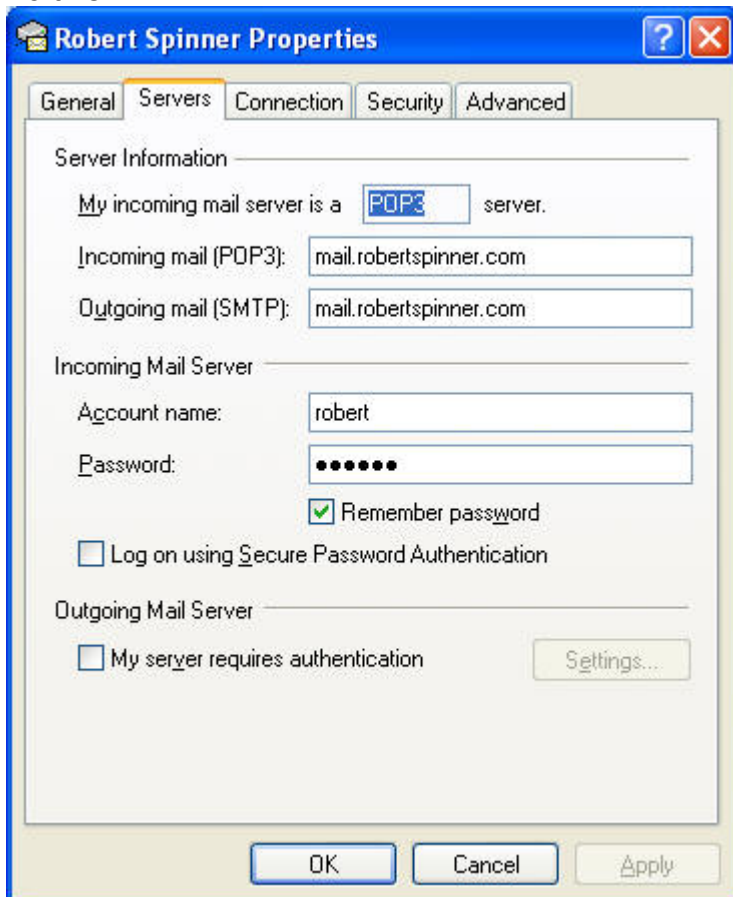

These instructions are offered "As Is" and at your own risk. AtTheTipWebs.com, any of our staff members, affiliates, etc. are not responsible for any problems related to the use of these instructions, nor do we offer any support of any kind by phone, visit or e-mail, etc. By using these instructions you accept all responsibility and liability for the results that occur.

These instructions will show you how to fix your Outlook Express e-mail account if you have an account with AtTheTipWebs.com. The problem is caused by Outlook Express, sometimes it changes your computer's incoming mail server. This needs to be changed back to your, the correct, mail server.

1. Open Outlook Express, go , then .
2. From the top menu click  then .
3. From this window, click the  tab. This will show you all the mail accounts set-up on the computer.
4. Click the account you need repaired.  It will turn blue.
5. Click  button on the right.
6. Click the  tab at the top of the window.
7. You need to change the **Incoming mail (POP3):** and the **Account name:**. In the Incoming mail box, replace the word localhost to your domain information (mail.yourwebaddress.com). Then go to the Account name box remove everything behind your user name (the part of your e-mail address before the "@" sign).
From this:

To this:

8. After you change the information click **Apply** then click **OK**.

9. Click the  button.

10. Click the  button to check for new messages.

NOTE: If you have mail in your Outbox you may need to click the Send/Recv button 2 or 3 times.
